REVIEW	CODE REVIEW 9	HISTORY

Requires Changes

2 SPECIFICATIONS REQUIRE CHANGES

You are doing a great job on this project.

All asserts are correct, but some items should be reviewed and fixed.

I added more details about it on the Project Review tab and some suggestions to improve your code on the Code Review tab. Please review your file and re-submit your project when everything is ok.

Good studies!

Code Quality

✓   All code lines can be run without error. All `assert` are okay.

✓   Appropriate data types (e.g. strings, floats) and data structures (e.g. lists) are chosen to carry out the required analysis tasks.

↻   **Loops and conditional statements are used to process the data correctly.**

In some tasks , we expect that you don't use pyhton functions like `sum` or `count` to process the data.

Loops and conditional statements should be used to process the data correctly.

Also, the median is being calculated incorrectly.

✓   Functions are used to reduce repetitive code.

↻   **Comments, function and variable names enable readability of the code.**

All variables of your code should have descriptive names.

I added more information and suggestions about it on the Code Review tab.
